

## TECHNICAL DEVELOPER ASSESSMENT

**Question 1 of 50:** Whenever the response from the "Send request" action in the HTTP connector contains a non-2XX response code, the error message in the body will be returned.

**A: TRUE**

B: FALSE

**Question 2 of 50:** You can customise the branding of the Workflow App Portal (URL/Logo/Colours).

**A: TRUE**

B: FALSE

**Question 3 of 50:** Which is a standard trigger across all RDBMS connectors?

**C: New Row (RDBMS tiêu chuẩn: SQL Server, MySQL,...)**

A: Updated Row

D: Updated Column

B: Deleted Row

**Question 4 of 50:** What Workato feature allows you to store data to power your Workflow App?

A: CSV Tools by Workato

D: Variables by Workato

C: Workato SQL DB

**B: Data Tables**

**Question 5 of 50:** When configuring RDBMS triggers, Workato fetches tables in your database automatically.

A: FALSE

**B: TRUE**

**Question 6 of 50:** Insights allows users to ~~create a custom job table for each recipe~~ and display mappable fields in tabular format.

A: TRUE

B: FALSE (Chỉ tập trung vào Dashboard, Metrics, Charts và Phân tích số liệu)

**Question 7 of 50:** What is a manifest in the context of Workato's recipe lifecycle management?

D: A feature that allows users to create custom connectors for various applications.

C: A record of all the selected recipes and their dependencies, such as application connections, lookup tables, and account properties.

B: A record of all the recipes from a particular workspace for export and re-export.

A: A tool used to monitor the performance of recipes in real-time.

**Question 8 of 50:** Your organization frequently moves large datasets from cloud storage to a Customer Relationship Management (CRM) system. To ensure the process is both efficient and reliable, which of the following steps should you take to maximize data processing in Workato?

A. Match batch triggers with batch actions.

B. Increase recipe concurrency to run multiple jobs simultaneously.

C. Use synchronous processing to ensure data integrity.

A: A and B only.

D: A, B and C.

C: A and C only.

B: B and C only.

**Question 9 of 50:** What file format are Workato's Automation Accelerators delivered in?

A: CSV

C: XML

B: ZIP

D: TXT

**Question 10 of 50:** What is the primary function of the Workato On-prem Agent (OPA)?

**B: To provide a secure way for Workato to selectively access customer-authorized on-prem apps, databases, and folders**

D: To manage user credentials

C: To replace the need for cloud services

A: To open ports in the corporate firewall

**Question 11 of 50:** Which best describes the use of Workato's "Dependency Graph"?

D: It reduces operational costs by optimizing the use of resources and infrastructure in the workspace.

C: It enhances security by isolating sensitive data and operations from other activities in the workspace.

**A: It **visually** illustrates the relationships between assets and resources in a workspace, helping users understand dependencies.**

B: It automates the execution of recipes based on the dependencies identified between different assets.

*“Dependency Graph là công cụ trực quan giúp xem và hiểu các mối quan hệ phụ thuộc giữa các asset”*

**Question 12 of 50:** You are automating the customer order handling process for an e-commerce platform using Workato. The workflow includes the following steps:

1. Validating order details
2. Checking inventory
3. Processing payment
4. Updating the order status in the database

To modularize and reuse these steps across different recipes, you implement recipe functions with the parent (calling) recipe structured as follows:

Trigger: New order received.

Action: Call the "Validate Order Details" recipe function.

Action: Call the "Process Payment" recipe function.

Action: Call the "Update Order Status" recipe function.

In this scenario, which of the following recipe functions is/are synchronous?  
(Chọn nhiều đáp án)

C: "Update Order Status" recipe function

**B: "Process Payment" recipe function**

**A: "Validate Order Details" recipe function**

*“Synchronous function là hàm phải chờ kết quả trả về trước thì mới bước tiếp theo”*

**Question 13 of 50:** What is a key consideration for optimal performance when using batch triggers in Workato?

C. Using batch triggers only for real-time data processing.

**B. Matching batch triggers with batch actions for optimal performance.**

A. Ensuring the batch size is set to 1.

D. Avoiding the use of batch triggers with cloud storage connectors.

**Question 14 of 50:** You can perform custom sorting logic in SQL Collection by Workato.

**A: TRUE**

B: FALSE

**Question 15 of 50:** Each accelerator is tailored for a variety of use cases within a specific application.

A: TRUE

**B: FALSE (Chỉ phục cho một use case hoặc process cụ thể)**

**Question 16 of 50:** Configuring the "Result schema" is required to use recipe functions.

A: TRUE

**B: FALSE (Recipe Function có thể hoạt động mà không cần Result Schema)**

**Question 17 of 50:** It is beneficial to understand the responsibilities of other roles for each partner workflow.

B: FALSE

A: TRUE

**Question 18 of 50:** When should an implementation and onboarding wrap-up call first take place with the Customer?

A: After the customer has taken the onboarding survey

C: After First Value has been achieved

B: After the customer has taken the ePSAT/PSAT surveys

D: All of the above

*“Implementation → Onboarding → First Value → Wrap-up Call”*

**Question 19 of 50:** What is the impact of processing **events individually** versus as a batch in a job that reads a CSV file from an external data source and syncs them to Salesforce?

C: No Impact on Task Count: Whether events are processed individually or as a batch has no impact on the total task count for a job.

D: Increased Task Count: Processing events individually increases the total task count for a job, as each event is handled separately, leading to more tasks being created.

A: Increased Data Accuracy: Processing events individually increases data accuracy, as each event is handled separately, ensuring more precise data handling.

B: Reduced Task Count: Processing events individually reduces the total task count for a job, as each event is handled separately, leading to fewer tasks being created.

*“Individual Processing → Nhiều Task hơn, Batch/Bulk Processing → Ít Task hơn”*

**Question 20 of 50:** Using the available actions in the SQL Collection by Workato connector, which types of files can you create lists from?

A: XML

C: JSON

D: All of the above

B: CSV (Create Collection/List from CSV)

**Question 21 of 50:** What is an API collection in Workato's API Platform?

C. A group of API clients

A. A set of API tokens

**D. A set of endpoints that can be managed together**

B. A collection of API logs

**Question 22 of 50:** An AI agent chooses the wrong tool because it cannot understand what each tool does. What design flaw does this indicate?

A. Missing data pipelines

**B. Lack of semantic descriptions in MCP tools**

C. Weak authentication

D. Poor API design

*“AI hiểu sai hoặc chọn sai Tool thì phần lớn sẽ do Semantic Descriptions sai”*

**Question 23 of 50:** What defines the concurrency limit in Workato's API Platform?

A. The maximum number of API tokens that can be created

D. The maximum number of API clients that can be managed

C. The maximum number of API collections that can be created

**B. The maximum number of requests your workspace can process simultaneously (Xử lý đồng thời)**

**Question 24 of 50:** You need to evaluate the impact of automation on your business processes, including **time and money saved**. What type of data analysis within Workato Insights can help you achieve this?

B: Workflow performance

**D: Automation impact**

A: Usage analytics

C: App analytics

**Question 25 of 50:** You are working on a complex business process with multiple steps that needs to be broken down into smaller, manageable workflows. To

accomplish this, you decide to use recipe functions. Which of the following steps should you take to effectively implement recipe functions?

A. Use recipe functions to separate repeatable sets of actions that can be called from other recipes.

B. Ensure that recipe functions are only used within ~~the same business process automation~~.

C. Use asynchronous calls for recipe functions when the successive steps do not depend on the outcome of the function's workflow.

**C: A and C only.**

D: A, B and C.

A: A and B only.

B: B and C only.

**Question 26 of 50:** Which of the following statements best explains why HTTP connectors would be used instead of standard Workato connectors?

A. HTTP connectors enable you to create custom triggers and actions, which can be tailored to specific needs that standard Workato connectors may not support.

**B. HTTP connectors allow you to integrate with any cloud application that has an HTTP-based API, providing greater flexibility in connecting to various services.**

C. HTTP connectors can be used to extend the functionality of existing Workato connectors by adding new triggers or actions, enhancing the capabilities of your integrations.

*“Workato có nhiều Connector dựng sẵn nhưng sẽ có trường hợp ứng dụng nào đó chưa có Connector hoặc chưa hỗ trợ, HTTP Connectors cho phép giao tiếp với bất kỳ ứng dụng nào có HTTP/REST API”*

**Question 27 of 50:** A team wants MCP to handle unpredictable, **real-world** scenarios. What design principle is most important?

A: API chaining

B: Static workflows

**C: Flexible, context-aware orchestration (Điều phối linh hoạt và hiểu ngữ cảnh)**

D: Hardcoded logic

*“Unpredictable scenarios, Dynamic environments, Real-world, AI decision making, Agent orchestration”*

**Question 28 of 50:** What is the "Business Logic" component of a workflow app implemented through?

A. Accelerators

B. API Platform

D. Workato Data Tables

**C. Recipes (Business Logic được triển khai bằng Recipes)**

**Question 29 of 50:** How can trigger conditions help in reducing task consumption?

C. By ensuring that all events picked up are processed.

**B. By filtering only the necessary events for processing.**

D. By ensuring each task processes a single record.

A. By increasing the number of events processed.

**Question 30 of 50:** How does Workato's On-prem Agent (OPA) ensure compliance with security requirements?

**B: By allowing for "ground-to-ground" integration, meaning that secure data never leaves the data center**

C: By leveraging ~~Workato's FileStorage~~

D: By encrypting data with a ~~third-party service~~

A: By storing data in the ~~cloud~~

*“OPA được thiết kế để kết nối hệ thống nội bộ ground to ground”*

**Question 31 of 50:** What are the two authentication methods that Workato Workflow Apps provide compatibility with? (Chọn nhiều đáp án)

A. Password-based authentication

**B. OAuth-based authentication**

D. Biometric authentication

**C. SAML-based Single Sign-On**

**Question 32 of 50:** A workflow requires both deterministic data (e.g., revenue) and AI-generated insights. How should this be handled?

A: Use only APIs (Thiếu AI tạo insight)

B: Let AI generate everything (Dễ sai lệch số liệu)

C: Remove AI from the process (Thiếu yêu cầu)

**D: Separate deterministic actions from AI reasoning steps**

**Question 33 of 50:** A team designs MCP starting from “expose all data.” What is the flaw?

**A: Technology-first instead of workflow-first thinking**

B: Too scalable

C: Too secure

D: Too slow

**Question 34 of 50:** Your organization seeks to evaluate the impact of automation on business processes using Workato Insights. Which of the following types of data analysis can be performed with Workato Insights?

**D: All of the above**

B: App analytics

C: Automation impact

A: Usage analytics

**Question 35 of 50:** For RDBMS recipe workflows, which is the least efficient combination of actions?

A. Batch Input, Batch Output

C. Batch Input, Combination of Batch and Singular Output

**B. Batch Input, Singular Output**

**Question 36 of 50:** How many default environments does Workato provide?

B: 5

C: 10

D: 100

A: 3

*“Development, Testing và Production”*

**Question 37 of 50:** A developer creates tools without error handling. What is the risk?

A. Reduced scalability

B. Poor UX

C. Slower execution

D. Workflow failures without recovery or feedback

**Question 38 of 50:** If an API endpoint exists but there is no out-of-the-box (OOB) action for it, should you use a HTTP Connector or HTTP Custom Action?

B: HTTP Connector

A: HTTP Custom Action (Chưa có thì Custom)

**Question 39 of 50:** A team designs MCP tools that require too many inputs from users. What is the impact?

A. Reduced usability and adoption

B. Improved scalability

C. Better accuracy

D. Faster execution

**Question 40 of 50:** An MCP server fails when integrated with multiple AI tools. What is the likely issue?

A: Lack of adherence to standardized protocol design

B: Weak APIs

C: Poor UI

D: Missing logs

**Question 41 of 50:** To sync Google sheets data into Salesforce daily, which of the following should you use?

A: Bulk trigger only

C: Combination of bulk action and bulk trigger

D: None of the above

**B: Bulk action only**

**Question 42 of 50:** A team wants AI to escalate only **high-priority** tickets. What is required?

**A: Context-aware logic and structured data inputs (Ngữ cảnh và cấu trúc dữ liệu)**

B: Faster processing

C: Manual triggers

D: More APIs

**Question 43 of 50:** An AI agent repeatedly selects a suboptimal tool despite better options being available. What is the issue?

A: Poor APIs

**B: Tool descriptions do not clearly differentiate use cases**

C: Missing logs

D: Weak infrastructure

Question 44 of 50: Which of these are common strategies to reduce task consumption? (Select all that apply.)

**D: Variable grouping**

**B: Trigger conditions**

**A: Batch/bulk processing**

C: While loops

**Question 45 of 50:** Which of the following is a benefit of using RecipeOps by Workato?

D. It enables users to build custom dashboards from recipes' data.

**B. It allows for autonomous integration and monitoring. (Tích hợp và giám sát tự động)**

C. It is focused on monitoring a single recipe.

A. It encourages manual intervention for error handling.

**Question 46 of 50 :** Which Workato connector can you use to search job history and rerun jobs?

C: Callable Recipe by Workato

**B: RecipeOps by Workato**

A: Recipe Function by Workato

**Question 47 of 50:** As an integration specialist, you are responsible for connecting a cloud storage service with a CRM system using the HTTP connector. Your goal is to design a Workato recipe that ensures secure, reliable, and efficient data transfer between the two systems. Which of the following steps should you take to achieve this?

**D: All of the above.**

B: Ensure that sensitive data such as tokens and passwords are stored in the connection setup or use account properties, rather than hard-coding them in the recipe.

A: Use the HTTP connector to configure a custom action with the appropriate HTTP method (GET, POST, PUT, DELETE) and endpoint URL.

C: Verify the HTTP request and response setup in the action.

**Question 48 of 50:** A company wants to scale MCP across departments. What is the biggest challenge?

A. Performance

B. Cost

**C. Governance and standardization**

D. Data storage

**Question 49 of 50:** RecipeOps is a functionality of an error monitoring block.

A: TRUE

**B: FALSE**

*“RecipeOps và Error Monitoring Block là hai cơ chế hoàn toàn khác nhau dùng để quản lý và xử lý lỗi”*

**Question 50 of 50:** To run the "Execute stored procedure" action successfully in Workato, what is required?

- A. The stored procedure must be selected from a pick list or provided in text mode.
- B. The stored procedure must return a single value.
- C. The stored procedure must be part of a database schema.
- D. The stored procedure must be written in JavaScript.
